What You Can't See COULD Hurt You! An OSHA and Infection Prevention and Control Update

With Karen Gregory, RN, CDIPC

Would you change the way you think about your safety if you could see the areas that have been contaminated with blood or bloody saliva while delivering care? This fast paced, entertaining session will provide insight into those unseen areas of risk and outline risk mitigation strategies as outlined in the Bloodborne Pathogen Standard. In addition, infection control and prevention measures linked to DUWL treatment and maintenance, and instrument processes will be discussed using real life scenarios that many practices face every day! Bring your questions and leave with checklists and how to apply these safety measures operationally.

Course Objectives:

- Recall signs, symptoms, and mode of transmission of HIV, Hepatitis B, and Hepatitis C
- Discuss the risks of exposure specific to bloodborne pathogens and prevention methods
- Discuss best practice for maintaining dental unit waterlines
- Recall four (4) critical steps in instrument processing
